

CARING FOR YOUR LUXURY VINYL TILE FLOORING

A helpful guide to making the most of your new flooring

Luxury Vinyl Tile Flooring (LVT) is made to last, so with just a little TLC you'll enjoy years of beauty beneath your feet. Unlike a natural floor, LVT needs relatively little maintenance to keep it looking as good as new.

PROTECT YOUR FLOOR

Put protective pads on furniture. Place soft pads on the bottom of table and chair legs and keep an eye that they haven't fallen off. Don't use protectors made of metal as they can wear patches and scratch the floor.

MAINTENANCE

- LVT is a low maintenance product however, we would recommend dust mopping or sweeping with a soft brush day-to-day
- To damp mop, use suppliers cleaning fluid Maintainer (dilute as recommended on the instructions), a traditional string mop and standard wringer bucket
- Work backwards to the door in an "S Shape" to mop
- Rinse and wring the mop frequently

SPOT CLEANING

- Wipe up any spillages immediately then clean using cleaner as above. Spillages of fats or grease can make floors slippery
- Be careful when using furniture or glass polish as an overspray of silicone can make the surface slippery

RESTORING AND PROTECTING

New floors can be protected and older floors restored with the use of products from the suppliers you have chosen.

This acts as an extra protective layer which is helpful to make regular cleaning easier. It is designed to be stripped periodically at which time minor marks and scuffs contained within the dressing will also be removed.

HINTS AND TIPS

- We recommend only using Manufacturer Maintenance products, Other products may lead to inferior results or leave harmful residues
- Take care to avoid staining. Blot up accidental spillages as soon as possible with a clean absorbent cloth or paper towel using a manufacturer cleaning product
- Regularly remove dust and dirt using a dust mop
- Use an entrance mat and an external mat to reduce the chance of dirt, grime and grit being walked onto your floor
- Remove dry or hardened substances with a blunt scraper or plastic spatula

DO NOT USE STEAM CLEANERS

- If vacuuming, dust mop first and check that nothing sharp is in contact with the floor which could get stuck under the vacuum and cause scratches
- Use felt pads or furniture glides to protect the floor and add castor cups to spread loads and prevent indentations.
- Avoid contact with non-approved rubber e.g. mats or furniture bases
